EXCAVATION COINS AND STRAY FINDS ANCIENT

Coins from Excavations at Negotino Gradište, 2009-2011

S. BITRAK and N.V. SEKUNDA

[PLATES 50-54]

Abstract. Systematic, well-documented excavations have been carried out at the site of Negotino Gradište, Republic of Macedonia, since 2009. This article publishes the coins found during the 2009-2011 seasons in a preliminary fashion.

THE most important geographic feature in the South-Eastern part of the present-day Republic of Macedonia is the valley of the river Vardar, known in Antiquity as the Axios. The Ravenna Geographer (4.9.7 p. 51 ed. Schnetz) locates ‘Asigonia’ (i.e. Antigoneia) on the road from Stobi to Thessalonike, whereas Pliny (*NH* 4.34) mentions an Antigoneia in Paionia lying between Stobi and Europos on the Axios river. The *Tabula Peuteringiana* (6.5), the most important source from which the historical geography of Hellenistic Macedonia can be recovered, more precisely locates Antigoneia on the Axios 12 Roman miles downstream from Stobi and 11 miles upstream from Stenai. The site of Stobi is known and confirmed by archaeological excavation, while Stenai can be securely located at the present Demir Kapija.

Between these two cities there are several sites which have yielded ancient finds, and which could be identified as Antigoneia on the Axios. Ivan Mikulčič surveyed the whole area in the early 1980s, and has made the most cogently argued contribution to the problem so far. According to Mikulčič,¹ Tremnik is too far away from the Axios and from the road, and he suggested that Antigoneia lay on the hill called Negotino Gradište overlooking the modern town of Negotino. This location is the most probable one so far suggested. Negotino Gradište lies about 17km away from Stobi, and so at an appropriate distance along the road from Stobi to Stenai. It lies at a strategic site on a high plateau, overlooking a crossing of the Vardar. The area of the ancient city as currently known is, however, limited to 3.5ha. This seems an area more appropriate to a small town rather than to a city which seems, from its very name, to have been a royal foundation.

¹ I. Mikulčič, ‘Problemot na Antigoneja’, *Godishen Zbornik (Skopje)* 11 (37) (1984), pp. 111-38 (with German summary). For a discussion of the problem in English see G.M. Cohen, *The Hellenistic Settlements in Europe, the Islands, and Asia Minor* (Hellenistic Culture and Society 17, Berkeley, Los Angeles, Oxford 1995), pp. 92-3.

Systematic, documented, archaeological excavations have been carried out at Negotino Gradište annually from 2009 by an international project, the principal funding for which was initially provided by the Instituto Valenciano de Estudios Clásicos y Orientales (IVECO, an Institute within Fundación Libertas 7) down to 2011, and from 2012 onwards by the Polish National Research Centre (Narodowe Centrum Nauki).² Other significant funding has been provided to the project by Gdańsk University, The Macedonian Ministry of Culture, and a private Polish sponsor (KRAudyt, a private company part-owned by Tadeusz Robiński). Field work on the site has been co-directed by Goran Sanev representing the National Archaeological Museum of Macedonia (Skopje), and Nicholas Sekunda representing Gdańsk University, one of the authors of the present article; the other being the Curator of Numismatics of the National Archaeological Museum of Macedonia (Skopje).

Our aim is to bring the coins found during excavations to the attention of the numismatic community as quickly as possible. It is hoped that in the medium-term future one of the volumes dealing with the objects recovered from the site should be devoted to the coins, and the authors would therefore welcome the critical comments of *NC* readers (sanjabitrak@yahoo.com, sekunda@ug.edu.pl).

CATALOGUE

Each coin has an alphanumeric project identifier, consisting of an initial letter identifying the type of material (in this case M for ‘Moneta’), two numbers representing the season of excavation (in this case 09 to 11), and a number running from 1 onwards to identify each individual coin found that season. All coins are bronze, unless otherwise indicated. With each coin is given its weight (g), diameter (mm) and, where determinable, die-axis (expressed as hours of the clockface, e.g. 12h). The legends on most of the coins are partly or wholly illegible, and in the headings we have provided the complete original form.

Much preliminary work was done on identifying the coins published here by Drs Wojciech Brzillowski (Institute of Art History, Adam Mickiewicz University, Poland) and Arkadiusz Koperkiewicz (Institute of Archaeology and Ethnology, Gdańsk University, Poland).

11. M-11-58. 2.55g.; 18mm.; 3h.

Perseus, 174/3-168 BC.

Obv. Head of the hero Perseus r.

Rev. Eagle with open wings.

AMNG (1935), Perseus 7 (Taf. xxxvi, 3; different position of feathers on right wing); SNG Cop. 1271-1280 (closest arrangement of wing feathers are 1278 and 1280; NBRM 189-191

12. M-09-3. 6.32g; 22mm; 8h.

13. M-11-14. 4.97g.; 16mm.; 1h

Obv. Head of the hero Perseus

Rev. Eagle on thunderbolt; BA ΠΕΡ

SNG Cop. 1275-1280; NBRM 189-193.

14. M-10-7. 4.25g; 18mm; 1h.

15. M-11-47. 3.38g; 18mm; 9h?

Unidentified mint, 3rd-2nd century BC (?)

Obv. Macedonian shield

Rev. Illegible

16. M-11-30; 2.89g; 13mm.

Uncertain place of production, plated pseudo-Rhodian drachm, 172-168 BC

Obv. Head of Helios three quarter facing r.

Rev. Rose; to r., bud; to l., club on bow; above, ΣΤΑΣΙΩΝ; around rose-stalk, Ρ – Ο.

NBRM no. 27.

17. M-09-6. Silver plating on bronze core; 1.44g; 14mm; 1h.

This coin has been previously published by Ashton (NC 2013, pp. 42-3), who believes that the pseudo-Rhodian drachms bearing the legend ΣΤΑΣΙΩΝ with crossed club and bow were struck at a mint in Northern Greece to pay mercenary troops at the time of the Third Macedonian War, 172-168 BC. These imitate genuinely Rhodian originals bearing the same magistrate name with crossed club and bow, with the usual weight standard of 2.75g, which were struck in quantity circa 200 BC. The

pseudo-Rhodian drachms have erratic weights which are generally lower than the Rhodian originals, have irregular die-axes, and invariably have their find-spots in the central or northern Greek mainland.

Ashton has previously suggested (*NC* 1988, pp. 29-30) citing a forthcoming (but apparently still unpublished) article of Jean Helliesen, that the pseudo-Rhodian drachms were struck by Perseus to pay his Cretan mercenaries. During the early second century Rhodian currency circulated on Crete in quantity, so it was familiar and acceptable to Cretan mercenaries as opposed to Macedonian silver. Perseus had 3,000 Cretans serving in his army, under the command of 'their own leaders' Sosos of Phalaearna and Syllos of Knossos (*Livy* 42.51.7). This makes it probable that these troops are a symmachic contingent, sent to Perseus by the Cretan *koinon* by virtue of a previously existing alliance between the two.

In a treaty concluded between Antigonos Doson and the Cretan city of Hierapytna in about 224 BC the king is to pay an Alexandrine drachma and (three?) obols per day to every soldier the Hierapytnans sent out (*ICret.* III, iii, 1A pp. 25-6, line 31). The financial terms are unlikely to have differed much over time. According to the terms of a *symmachia* signed between the Cretan city of Hierapytna and Rhodes around 200 BC (*ICret* III, iii, 3A, vss. 27-9 p. 32-5) the Rhodians are to pay nine Rhodian obols a day to every man the Hierapytnans sent out, and two drachmas a day to the officers commanding no fewer than 50 men. These financial terms are repeated in lines 39-42 of a *symmachia* concluded between the Cretan city of Olous and Rhodes at about the same time (*Kret. Chron.* 15/16 (1961/2) pp. 231-4). So the going rate for Cretan mercenaries seems to be 1½ drachmas a day, and 2 for officers. The Cretans do not seem to have been sent home for the winter. Cretans are found manning the garrison at Uscana in the winter (*Livy* 43.10.1). Thus the volume of Pseudo-Rhodian coinage that Perseus had to mint annually can be calculated at more than 1,642,500 drachmas per year for the Cretan mercenary contingent alone, leaving aside any minted to pay Perseus' northern auxiliaries (Ashton *NC* 2013, 47).

Pseudo-Rhodian drachmas were also struck to pay Cretan troops fighting on the Roman side: see Ashton, *RN* 1989, pp. 41-8 esp. 47 (Eretria), and id. *NC* 2000, pp. 97-100 (Chalkis), and 100-106 esp. 105 (Histiaia in 171 BC or later?); also Ashton *NC* 1998, p. 226 (Kos?); see also Bresson *REA* 98, 1-2 (1996), pp. 73-4, for Rhodian/pseudo-Rhodian drachmai as a sort of 'badge' for payment of mercenaries in general. The Roman army formed at the outbreak of hostilities included Cretan archers, although *Livy* (42.35.6) tells us that 'the number which the Cretans sent on request is not certain'. These troops were also presumably sent out by the Cretan *koinon*. Subsequently the Romans decided to send three envoys to Crete (*Livy* 42.35.7) presumably to ask for an increased number to be sent out. The outcome of this embassy is not known. In 170 BC a Cretan embassy visited Rome. The Cretans reported that they had sent to Macedonia as large a force of archers as the consul Publius Licinius had stipulated, but they did not deny that a larger number were serving with Perseus (*Livy* 43.7.1-4). In 168 BC during the storming of the Olympus passes we are told that the Roman force included 'two hundred mixed Thracians and Cretans with Harpalus'. A Cretan deserter informed Perseus of the route they had taken and a sharp encounter ensued (*Plut. Vit. Aem.* 15.4, 16.1).

The expeditionary force sent to Greece by Rome's ally, Eumenes II of Pergamon, also included Cretans. An Attalid force that clashed with Perseus' Cretans near Pherai included about 150 Mysian and Cretan light infantry (Livy 42.57.7). It is not known, however, if these troops were also a symmachic contingent sent on the basis of a treaty obligation, or a regiment of mercenaries retained by the Attalid army.

The fact that this coin was found in Negotino Gradište supports the evidence that the pseudo-Rhodian drachms bearing the legend ΣΤΑΣΙΩΝ with crossed club and bow were issued to pay troops fighting on the Macedonian side (for other northern find-spots of such coins, see Ashton, *NC* 2013, pp. 47-8). The coin we have here, however is a plated imitation of a pseudo-Rhodian drachm with a bronze core. Ashton (*NC* 2013, p. 45) has suggested that these plated imitations are counterfeits. The army fighting on the Macedonian side must have been supported by a thriving market, in which it would be relatively easy to pass these imitations off as the genuine thing. Negotino Gradište lay in ancient Paonia, which at the time of the Third Macedonian War was a subordinate province under the *stratēgos* Didas, who, in the parade at Kition on the eve of the war, is mentioned as having armed and mustered a formation of 3,000 Paionians, Agrianians and Thracian settlers (Livy 42.51.5-6). The coin might have found its way from the market supplying the army to Negotino Gradište through the agency of one of the Paionians serving with Didas.

Macedonian issues, Republican Period³

Gaius Publilius, Quaestor, 168-166 BC.

Obv. Helmeted head of Athena, right.

Rev. Ox grazing, r.; above, ΓΑΙΟΥ; below, ΤΑΜΙΟΥ .

AMNG (1935) 8.4; MacKay 1968, pp. 6-8; Touratsoglou, *CRWLR*, pp. 55-56; SNG
Cop. 1323; Ohridska Banka 213-216.

18. M-11-20. 8.14g; 20mm; 1h.

4th Meris, c. 166/5 BC.

Obv. Mask of Silenus, facing.

Rev. ΜΑΚΕ/ΔΩΝΩΝ within ivy wreath; above, Δ.

AMNG (1906) no. 212; *BMC Macedonia*, p. 14, 55; SNG Cop. 1324; SNG *Tübingen* 1224;
NBRM 216.

19. M-11-5. 7.45g; 21mm; 5h.

The obverse type was interpreted by Gaebler as a pun on the cognomen of D. Junius Silanus, praetor in 142/1 BC. MacKay 1968, pp. 8-11, assigns the issue to the years immediately after the creation of the Roman Protectorate; Touratsoglou, *CRWLR*, pp. 55-6, concurs.

Bottiaea, c. 185-168 BC or later?

Obv. Young head of Pan, r., pedum at shoulder.

Rev. Two recumbent goats in oak-wreath.

AMNG (1935) 34; *BMC* 46.

20. M-11-52; 8.94g; 20mm.

³ The majority of the city coinages placed here under this heading were assigned by Touratsoglou, *CRWLR*, pp. 55-7, to the period 187/6-168/7. We understand that more recent unpublished research suggests that they should be dated after Pydna.

Amphipolis, 168-c.31 BC

Obv. Head of Artemis Tauropolos r., at her shoulder, quiver.

Obv. Augustus, spear in r. hand, r. foot on prow, l.; IMP DIVI F; in exergue ACTIO.

Rev. Wreath on sella curulis; NONIVS•SVLPICIUS II•VIR•QVINQ.

RPC I 1548; *NBRM* 238; Ohridska Banka 49.

59. M-11-3. 12.29g; 24mm; 1h.

Thessalonica (c.27-23 BC)

Obv. Bare head of Augustus r., ΚΑΙΣΑΡ ΣΕΒΑΣΤΟΣ.

Rev. ΘΕΣΣΑΛΟ / NEIKEΩΝ in two lines within wreath.

RPC I 1557; Touratsoglou, *Thessaloniki*, Augustus 57-77.

60. M-11-27. 7.54g; 22mm; 1h.

A mint in Asia (?) (27-23 BC or a little later)

Obv. Bare head of Augustus r, CAESAR.

Rev. AVGVSTVS in one line in laurel wreath, dotted border.

RPC I 4100 (Antioch?); C.J. Howgego, ‘Coinage and military finance: the imperial bronze coinage of the Augustan East’, *NC* 1982, pp. 1-20, A3 (Asia or Antioch: Howgego, pp. 3-6)

61. M-10-10. 4.07g; 26mm; 1h (halved as).

62. M-11-51. 4.65g; 25mm; 1h (halved as).

63. M-11-61. 6.28g; 26mm; 1h (halved as).

The mint of these coins continues to be uncertain. The discovery of no fewer than three examples at Negotino Gradište supports the thesis that the mint was in Asia rather than at Antioch.

The following two halved coins (originally sestertii?) are placed under the Augustan period because the halving of coins, although not confined to that period, is especially frequent then, bearing witness to the lack of small bronze denominations in circulation.

Obv. Illegible.

Rev. Illegible.

64. M-10-6. 9.82g; 31mm.

Obv. Illegible.

Rev. Illegible.

65. M-11-2. 9.60g; 30mm.

Roman Imperial Period Provincial issues
